

AI-first Full Stack Engineer @ Wednesday

About the company:

[Wednesday](#) is a global technology consultancy. We integrate technology strategy, engineering, and design to drive digital product innovation.

At our core, we are a group of makers - Engineers, product managers, and designers. We care deeply about our work and think of it as a craft. We're an ambitious team and like to punch above our weight.

Role Overview:

As an AI Engineer, you will use modern data architecture, algorithms and processes to help our customers meet key business objectives. In this role, you may create, review, and optimise algorithms, and processes for our customers in the 0-1 and 1-n journey.

We're looking for a Full Stack Engineer who doesn't just write code—but builds fast, ships often, and leverages AI tools to move with 10x speed and precision.

This is not a role for a code monkey. You're someone who knows when to automate, when to prompt, and when to go deep. You think in workflows, not just functions. And you care about velocity with quality.

What You'll Do:

- Build and ship full-stack features using tools like React/Next.js, Node.js/Golang/Python, and cloud platforms (AWS/GCP).
- Use AI to accelerate your development process—from prototyping and debugging to scaffolding and testing.
- Integrate with LLM APIs, vector DBs, and agent frameworks where they offer real leverage.
- Own E2E delivery: clean code, clear commits, fast pipelines, and robust monitoring.
- Collaborate in small, high-context teams and contribute to architectural decisions.
- Continuously evolve your stack and workflows by experimenting with new tools, prompts, and plugins.

What We're Looking For

- 3–6 years of full stack engineering experience.
- Strong with modern frontend and backend frameworks (e.g., React, Next.js, Node, Golang, Python).

- Comfortable using and integrating with AI tools like OpenAI, HuggingFace, or LangChain.
- Experience with cloud infra (AWS/GCP) and CI/CD pipelines.
- Bonus: exposure to AI-native platforms (e.g., Relay.app, n8n, Supabase, Pinecone).
- Bias for action. You ship. You iterate. You care.
